

## VACCINES:

Dr. Cahill discusses how these new mRNA vaccines work

<https://thereisnopandemic.wordpress.com/2021/04/24/people-will-start-dying-a-few-months-after-the-first-mrna-vaccination/>

Dr. Bhakdi received his MD in 1970. He was a post-doctoral researcher at the Max Planck Institute of Immunobiology and Epigenetics in Freiburg from 1972 to 1976, and at The Protein Laboratory in Copenhagen from 1976 to 1977. He joined the Institute of Medical Microbiology at Giessen University in 1977 and was appointed associate professor in 1982. He was named chair of Medical Microbiology at the University of Mainz in 1990, where he remained until his retirement in 2012. Dr. Bhakdi has published over three hundred articles in the fields of immunology, bacteriology, virology, and parasitology, for which he has received numerous awards and the Order of Merit of Rhineland-Palatinate. He's one of the most cited scientists in German history.

*(these gene therapies are going to create an over-reactive immune system which will activate against viruses which are not dangerous. And your immune system can end up destroying your lung. The lymphocytes don't kill the spike protein. They kill the cell that's making the spike protein. Because now the immune system is primed to fight. And it is super aggressive. So if the real virus comes in future or a related virus – there are so many coronaviruses floating around us and any one will do – the moment they infect the lung or start making the slightest bit of the virus, the immune system is going to mount an attack and kill that lung. So what we fear is that these gene therapies will be creating an immune dependent enhancement of disease.)*

The American Vaccine Adverse Event Reporting System (VAERS) is a national vaccine safety surveillance program co-sponsored by the Food and Drug Administration (FDA) and the Centers for Disease Control. So not some conspiracy theory website. VAERS reported on April 23, 2021 that 3,362 people had died after getting COVID-19 vaccines – roughly 30 people per day. To put this in perspective, in 2018, 119 people were reported to have died after flu vaccines; 203 people in 2019. VAERS has a history of under-reporting deaths and disabilities resulting from vaccines, so the numbers are probably much higher. A report submitted to the Department of Health and Human Services in 2010 estimated that only 1% of vaccine adverse events are reported on VAERS. In the first 4 months of 2021, VAERS reported more deaths from COVID-19 vaccines than all vaccine deaths reported over 15 years from 1997 – 2013.

Dr. Hoffe: concerns re the vaccine effects

<https://healthimpactnews.com/2021/canadian-doctor-defies-gag-order-and-tells-the-public-how-the-moderna-covid-injections-killed-and-permanently-disabled-indigenous-people-in-his-community/>

Robert Malone, inventor of mRNA vaccines

Concerns about biodistribution are also now being raised about both the 'produced' Spike Protein and LNP components of the vaccines. Evidence of their delivery and expression systemically, beyond the injection site, is now available, including the unexpected accumulation of LNPs in the ovaries as revealed in the Japanese Ministry of Health animal studies

Paul E. Alexander received his bachelor's degree in epidemiology from McMaster University in Hamilton, Ontario, a master's degree from Oxford University, and a PhD from McMaster University's Department of Health Research Methods, Evidence, and Impact

<https://trialsitenews.com/the-covid-19-spike-protein-may-be-a-potentially-unsafe-toxic-endothelial-pathogen/>

Concerns have also been raised that the induced Spike Protein itself can act as a pathogen independent of the virus,

<https://scitechdaily.com/covid-19-is-a-vascular-disease-coronavirus-spike-protein-attacks-vascular-system-on-a-cellular-level/>

efficacy not as was optimistically expected or touted

informed consent cannot be said to have been granted if the doctor has not informed the patient (a) that they are a trial participant (b) that effective preventive and early treatment therapies exist, (c) that there are a wide range of possible adverse effects including death (d) that people below 70 years are a low risk of death from the virus and (e) that breakthrough infection and transmission is possible. free and informed consent are not being met if the patient is under duress regarding their employment or freedom to travel.
